

Powering Tamil Nadu's Progress ...

Note No. CMD / PS / D. 3 / 2015

dated 13.1.2015

Sub: Power management in the Transmission and distribution network –
instructions - reg

It is brought to my notice that in the past during summer season, several power interruptions in the transmission and distribution system have occurred due to overloading of power transformers, distribution transformers, overhead lines and cables. As the demand for power is expected to increase gradually from January 15, 2015 and reach its peak during the ensuing summer months, it is necessary that all the transmission and distribution equipments like Power transformers, distribution transformers, overhead lines, cables and other associated equipments are kept in healthy working condition. Critical materials should be kept ready to meet any emergencies. Preventive maintenance has to be carried out in all the equipments so as to avoid any breakdown during the ensuing summer months. **All Chief Engineers / Distribution/TANGEDCO and all Chief Engineers / Transmission / TANTRANSCO shall be held personally responsible for any lapses leading to breakdown of equipments and power interruptions in their respective areas.** Director / Distribution / TANGEDCO and Managing Director / TANTRANSCO (i/c) shall coordinate with all the Chief Engineers/Distribution and make necessary arrangements to avoid any breakdown of transmission and distribution equipments so as to maintain uninterrupted power supply throughout the State.

CMD / TANGEDCO

To

All Chief Engineers / Distribution / TANGEDCO
All Chief Engineers / Transmission / TANTRANSCO
Managing Director / TANTRANSCO (i/c)
Director / Distribution / TANGEDCO
